+336 26 22 85 91 — bah.awaa@gmail.com — <https://www.linkedin.com/in/awa-bah-592a74227/> — <https://AwaIn.tech/>

Software Engineer from Paris, France, always building applications that boost people's creativity, enhance user experiences, and drive engagement.

Technical skills

Programming	TDD, Accessibility, Unit testing, Integration testing, End-to-End testing
Languages	Typescript/Javascript, C#, Python, Go
Web frontend	ReactJS, design systems (Tailwind, Shadcn, MaterialUI), SaSS, HTML, CSS
Mobile frontend	Flutter
Backend	NodeJS, ASP.Net, NextJS, Entity Framework, Chi, Gorm, Backend as a Service (Supabase), PostgreSQL, MongoDB, SQL Server, ExpressJS, REST API
Tools	Docker, Railway, Heroku, Jenkins, Jira, Build tools (Webpack, Vite), Testing tools (Jest, Postman, NUnit, Playwright), Figma, Axe DevTools, Swagger, GitLab
Project management	Kanban, SCRUM, Agile methods
Communication	French (native), English (C2, TOEIC 990/990)

Experience

Fullstack Software Engineer

2022 - 2024

CEGID — SaaS Human Resources — Boulogne-Billancourt, France

Project: Skills System Integration Across Legacy Modules (Team Project)

- Contributed to the integration of the company's internal skills repository (e.g., C1 English certification) into legacy Talentsoft modules, ensuring consistent and visible skill data across the platform.
- Integrated React 16 components into a legacy .NET application, enhancing UI/UX while maintaining backward compatibility.
- Developed a data mirroring system using SQL stored procedures to synchronize skill-related data from modern services to older modules, improving cross-application communication and reliability.
- Resolved complex accessibility issues (e.g., keyboard navigation, screen reader support) using Axe DevTools and inclusive UX principles.
- Wrote test-driven, production-ready code using Jest (frontend) and NUnit (backend); supported by Jenkins-based CI/CD workflows.
- Participated in agile ceremonies and technical design reviews, contributing to continuous delivery and rapid iteration cycles.

Project: Employee Data Comparison and Validation Tool (Solo development, supervised)

- Developed a tool to compare employee data between legacy and modern applications, detecting discrepancies in data sets such as personal information, contracts, and roles.
- Implemented a searchable comparison system that allowed HR users to check employees by name or employee number using autocomplete and debounced search input.
- Built a detailed view to display the necessary legacy-side actions (add, update, or remove data) for each flagged employee, streamlining the data reconciliation process.
- Delivered a full Figma implementation in ReactJS and .NET under the guidance of the lead developer, with reviews and validations by the wider team.
- The project was delivered to deployment, resulting in a 13% increase in adoption during the first quarter after launch.

Volunteer Experience

Technical Team Member

2017 - Present

Nijikai — Association — Antony, France

- Developed an app to streamline jury processes, reducing the average evaluation time for stand artists from 2 weeks to just 3 days.
- Addressed jury challenges in assessing application quality and authenticity by integrating a voting feature with a confidence meter. Applications flagged with a confidence score above 50% were accurate 76% of the time, improving decision reliability.
- Reduced website downtimes by 30% by migrating hosting services to a more reliable provider.
- Maintained and upgraded WordPress-based websites and forums, ensuring security by addressing vulnerabilities through dependency updates.
- Researched and implemented open-source tools for Jonetsu, the association's convention, optimizing cost-efficiency and functionality.

Personal Projects

Starfire — Create your own bingo grid — Technical stack: NextJS, Redux, Postgres

2024

Website: <https://starfire.lol>

Developed a NextJS-based bingo making app that allows users to create and customize bingo cards with personalized backgrounds, titles, and fonts. Automatically deployed on Vercel through GitHub Actions, it uses AWS S3 bucket for image management.

Too Many Lux Skins — Tool — Technical stack: ReactJS Typescript

2023

Website: <https://too-many-lux-skins.awain.tech/>

A League of Legends skin roulette to help you choose your skin when your champion has too many (like Lux). It was developed using ReactJS. It is deployed through my self-hosted PaaS ZaneOps.

Education

Master's degree in software engineering ESGI — Paris, France

2022 - 2024

Specialized in web development

Relevant coursework: Languages (Javascript, PHP, Golang), Web technologies (Symphony, ReactJS, VueJS, API Platform, NodeJS), Native mobile technologies (Flutter), Business marketing, Project management

Bachelor's degree in Computer Science University Paris Cite — Paris, France

2019 - 2022

Bachelor's degree in Computer Science with a specialization in Cybersecurity and Web Development

Activities

- During the Jonetsu convention, organized by Nijikai, I am the Reception Manager of a team of 5 to 6 people. The Jonetsu convention is held (almost) every year. The last edition was held on the 3rd and 4th of May 2025 in Bourg-la-Reine, France.
- I also love drawing, some of my artworks are displayed on my portfolio website and baking lime-basil (yes, basil) macarons.
